

HACK SUMMIT

Team Name:
Code-Tuah

Problem Statement:
Open Innovation

TABLE OF CONTENTS

ABSTRACT	Describe your idea/solution/prototype.
TECHNICAL APPROACH	Technology and methodology to be used (e.g. language, framework, hardware and flow charts/working prototype).
FEASIBILITY & VIABILITY	Analysis of the feasibility, potential challenges and risk.
IMPACT & BENEFITS	Social, economic, environmental benefits and impact.
FUTURE SCOPE & NEXT STEP	Scalability, Long-Term Vision, Monetization/Adoption Strategy
OUR TEAM	All team members name, registration no. and mail.

ABSTRACT

WhatTheHack is an AI-powered open innovation platform that aggregates real-world problems from sources like Reddit, StackOverflow, Quora, GitHub Issues, and Twitter/X, and reframes them into structured hackathon-ready problem statements. The platform saves participants time, enhances innovation quality, and ensures teams solve impactful, real-world challenges instead of generic ideas. With filtering, categorization, and community submissions, WhatTheHack becomes a one-stop destination for meaningful hackathon problem statements.

TECHNICAL APPROACH

- **Frontend:** Next.js (React), TailwindCSS, Framer Motion for UI/UX
- **Backend:** Python (FastAPI) for APIs and AI processing
- **Database:** MySQL for storing problem statements, metadata, and user data
- **AI Layer:** OpenAI models for problem reframing and NLP classification (domains, difficulty levels)
- **Data Sources:** Reddit API, Stack Overflow API, GitHub Issues API, Twitter/X API, and Quora webscraping

PROTOTYPE FLOW

- Fetch raw problems
- AI reframes into hackathon statements
- Store & categorize in database
- Display in interactive problem feed

FEASIBILITY & VIABILITY

Feasibility

- APIs available for Reddit, StackOverflow, GitHub, and Twitter → reliable data sources.
- NLP + LLMs already capable of reframing and categorizing text.
- SQL backend ensures scalability and data reliability.

Viability

- Easy to deploy MVP within hackathon time.
- Adoption by hackathon participants/organizers is natural → they need problem statements.
- Minimal infrastructure required (cloud hosting + APIs).

Challenges

- Rate limits on APIs:
 - solved by caching + batching.
- Quora doesn't provide API:
 - solved by scraping with Playwright.

IMPACT & BENEFITS

- **Social Impact:** Surfaces real-world issues (healthcare, climate, education) and inspires solutions.
- **Economic Impact:** Startups and innovators can discover business opportunities.
- **Environmental Impact:** Promotes challenges in sustainability, energy efficiency, and green tech.
- **Hackathon Benefits:**
 - Saves hours of brainstorming time.
 - Improves project quality.
 - Encourages diversity in problem domains.

FUTURE SCOPE & NEXT STEP

- **Scalability:** Expand data sources (LinkedIn discussions, NGO forums, research papers).
- **Long-Term Vision:** Become a **global repository of innovation challenges**.
- **Adoption Strategy:** Partner with hackathon organizers to directly supply problem packs.
- **Monetization:**
 - Premium plans for organizers (curated challenge sets).
 - Sponsored problem statements from NGOs, startups, and corporates.
 - Subscription for users to save/export problem packs.

OUR TEAM

- **Samarth Ryan Edward** — *The Architect* (Backend + AI)
• RA2411003010893 \n se6334@srmist.edu.in
- **Arvin Mathew Saj** — *Frontend Ninja* (UI/UX + Next.js)
• RA2411026010601 \n as5425@srmist.edu.in
- **Ayush Saini** — *Data Wrangler* (APIs + DB)
• RA2411056010055 \n as1219@srmist.edu.in
- **Muskan** — *Visionary* (Pitch + Design)
• RA2411026010603 \n mp9593@srmist.edu.in

THANK YOU
