Evaluating Job Offers

Problem Statement:

How might we design a decision-making tool for job seekers to evaluate multiple offers?

Detailed Description & Suggested Solution:

Job seekers often face challenges in evaluating whether to accept a new job or remain in their current role, especially when factors like job satisfaction, salary, and career growth opportunities are involved. A decision-making app that helps users weigh the pros and cons, visualize future growth paths, and consider their personal and financial goals could provide clarity and confidence in their choices. This tool could also incorporate community feedback or mentorship options for added insights.
